M.A.Git

WEB Application - Readme file

Submission:

Name: Ido Hayun, **ID:** 204062574, **Email:** eidoil32@gmail.com

Name: Tim Buchbinder, **ID:** 313419814, **Email:** tim89909@gmail.com

Known Issues:

1. Blocking the option to select 'head' as branch name.

2. When watching old commit's files after that watching current file system is impossible, **Need to refresh page.**

3. Sometimes the system will show error even though the action executing well.

4. Somehow the system throws exception when deleting files after server is shutting off.
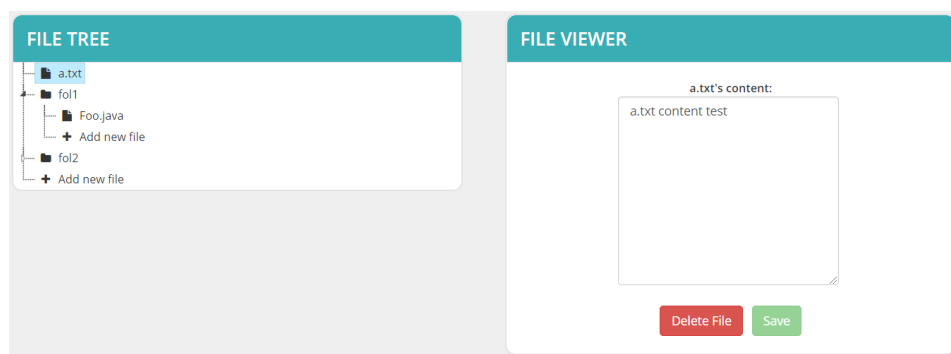

Table of content

Application explanation:

Bonuses:

8	Real file system

User can watch the files from commits or the existing file system in tree view.

Also, can add, edit and delete files very easy:
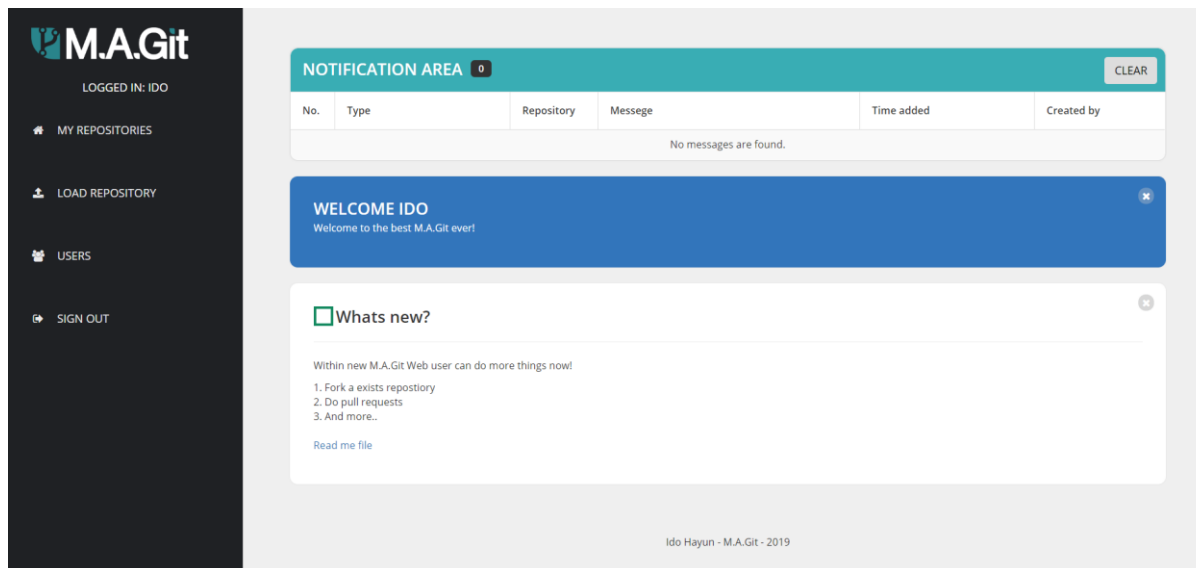

Login\Signup pages

The intro page of the website.

1	Login Page (left picture) – User will need to supply username and password, when the password and username are match the user will redirect automatically to the main page of the website.
2	Signup Page – Allow to new user to join M.A.Git and enjoy the easy life of version control system. When the user enters username and password (and hopefully the username is available) he will redirect automatically to the main page of the website.

WELCOME IDO
Welcome to the best M.A.Git ever!

Whats new?

Within new M.A.Git Web user can do more things now!

1. Fork a exists repostiory
2. Do pull requests
3. And more...

Read me file

Ido Hayun - M.A.Git - 2019
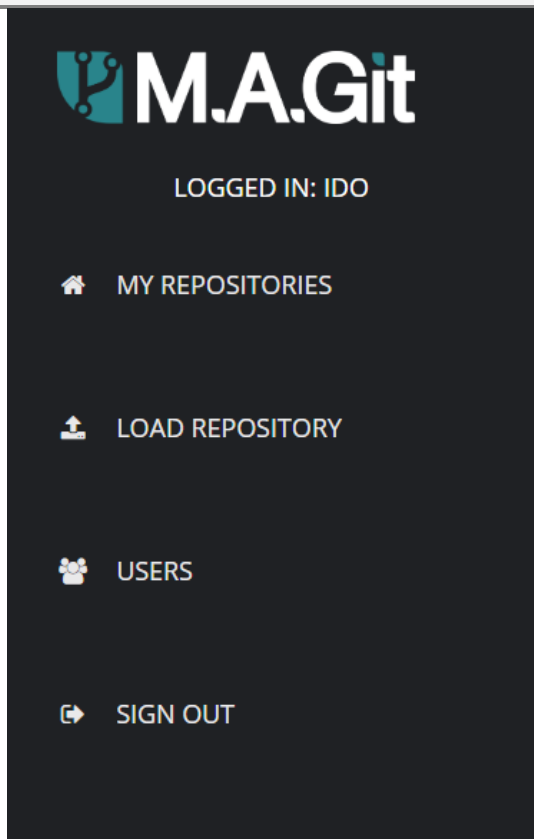

My repositories – Allow to user to watch all his own repositories (original and forked)

Load repository – opens modal window and allow to upload a new repository from XML file.

**Users** – in this section user can watch all registered users in the system and watch their repositories.

Sign out – Sign out !!!! (from the site)

My Repositories page

REPOSITORIES LISTS

No.	Repository name	Active branch	Branches	Last commit	Last commit's comment
1	rep 1	deep	3	24.10.2019	do commit
2	My repository #1	ido	2	14.10.2019	add file
3	Test merge repository	ido	3	19.10.2019	edit c.txt

In this page user can view all his repositories and by click on each he will redirect to repository manage page.

Single Repository – TAB 1: Repository details

| Repository details | Commit List | Branches | Files viewer | Options |

Repository Details

Head branch: deep
Owner username: ido
Repository name: rep 1

By clicking on each repository from the previous screen (My repositories page) User will be redirect to this page, allow him to watch and edit repositories files and do more things. In this specifically screen (like picture above) user see the basic repository details (if this repository is tracking beside the header 'Repository Details' will appear a badge:

Remote tracking repository

Single Repository – TAB 2: Commit List

COMMITS

No.	SHA-1	Comment	Creation date	Created by	Pointed by
1	f3be924857147758462dd53e6bff8f5481b2b338	add file	14.10.2019	Administrator	,My repository #1\ido,ido
2	24f2866016ea600ee89f889428a02222b1a64bc3	add file.txt and folder1	14.10.2019	Administrator	,My repository #1\master
3	8f5c255db9339394fcd02614d9722d3e27d43eac	base commit	14.10.2019	Administrator	,My repository #1\ido,My repository #1\master,ido

Single Repository – TAB 3: Branches

In this tab user can watch all commits in the history of the repository (the accessible only).

User can click on each of them and watch the files that layout from the selected commit.

BRANCHES

No.	Branch name
1	**RB** My repository #1\ido
2	**RB** My repository #1\master
3	ido

Single Repository – TAB 4: Files viewer

In this tab user can watch all branches in the repository include the RB one.

No special tag for RTB branches.

In this tab user can see all files in the system, with the ability to edit, delete and add new files. Also, when there is opened issues (WC is dirty) user can watch the current status:

When clicking on each of the headers all files\folders that related to the specific tab will show up.

OPTIONS

Checkout to other branch:	Save files current contents:	Merge to branch:	Simple pull data from RR:
No branch to select ▾ CHECKOUT	Commit	My repository #1\ido ▾ MERGE	Pull

Select commit sha-1 you want to reset:

f3be924857147758462dd53e6bff8f5481b2b338 ▾ RESET

Create pull request:

Pull Request

Create new branch   ido ▾   Push Branch

In this tab user can manage his repository:

1. **Checkout –** selecting branch and clicking checkout allow user to check out to other branch (RTB or normal one), when no other branch (if others is RB) the checkout button is disabled

2. **Commit –** allow user to save changes in files in the current repository, by clicking the "Commit" button a modal window will show up and user need to insert comment for the commit and save.

3. **Merge –** like ex2, user can merge between RTB or normal branches to all kind of branches and solve conflicts ONLINE! Amazing feature!

4. **Pull (ONLY FOR LR) –** allow user to pull all changes for head branch.

5. **Reset branch –** By selecting SHA-1 from the selection and clicking RESET button the head branch will change his pointed commit.

6. **Create new branch –** allow to create new branch and selecting SHA-1 or branch for him.

7. **Pull Request (NEW, Only for LR) –** allow to user to create new pull request for each branch in the current repository and for the target branch in the RR.

8. **Push branch (Only for LR) –** allow to user to push branch to the RR and make him RTB.
